

I-phase low-voltage I,25- I 25kVA, IP00

Type 2LT-00

Open single-phase non short circuit proof transformers with power range from 1,25 to 125 kVA. Designed and tested according to norm EN61558-2-4, IEC60076 and IEC60726. Standard types designed as isolating transformers with separate primary and secondary windings. Degree of protection IP00. Accessories; Temperature control units with alarm or trip [TC], PT100 sensors [PT], RTD sensors [RTD].

Applications:

This is an ideal design for transforming voltage up or down, or for installations which require a galvanic partition between the primary and secondary voltage. E.g. electric motor, compressor, cooling plants, automatic washing machines, etc. Custom designed types with other voltages, frequencies, electrostatic shield between primary and secondary, regulations, tapings, transport wheels or other features are available on request.
